PROFESSIONAL SUMMARY

Electrical and Electronics Engineering graduate transitioning into DevOps, with practical learning experience in Linux/Ubuntu, Bash scripting, Git, GitHub and introductory AWS cloud architecture. Completed a Bash-based Linux server health monitoring assignment, earning 93%, and developed a conceptual AWS services architecture for a web application scenario. Previous engineering experience includes generator and industrial electrical systems maintenance support, energy management and network operations support, operational data handling and technical documentation. Currently undertaking DevOps training at Livingworth Academy and building hands-on capability in automation, cloud infrastructure and deployment practices.

TECHNICAL SKILLS

Linux & Automation	Linux / Ubuntu, Bash scripting, shell commands, process checks, basic error handling
Version Control & CI/CD	Git, GitHub, introductory GitHub Actions concepts
Cloud	AWS fundamentals and service architecture (EC2, VPC, S3, EBS, IAM, KMS, CloudWatch, CloudTrail)
Data & Documentation	Microsoft Excel, operational data entry and reporting, Microsoft Word, technical documentation
Currently learning	Docker; practical containerisation and deployment

DEVOPS PROJECTS & PRACTICAL ASSIGNMENTS

Linux Server Health Monitoring Script

Bash scripting project | Assignment result: 93%

Created and ran a Bash script named *devops-health-check.sh* to generate an organised Linux server health report. The assignment covered hostname, current user, date, disk and memory usage, CPU count, uptime, process inspection and remote connectivity testing with curl. Used pipes, grep and awk to filter and extract command output, alongside variables, loops, conditions and basic error handling.

AWS Services Architecture Exercise

Cloud architecture learning assignment

Designed a conceptual AWS architecture for a web application by matching requirements to services for compute, networking, storage, access control, encryption, monitoring, auditing and deployment automation. Explored the roles of services including EC2, VPC, EBS, S3, IAM, KMS, CloudWatch, CloudTrail and AWS deployment services. This was an architecture exercise, not a production deployment.

PROFESSIONAL EXPERIENCE

Volunteer Social Media Manager & Project Officer

Illuminate Her Foundation | January 2026 – Present

Contribute as a volunteer in social media management and project support for an organisation focused on empowering girls and women through education, menstrual health and skills-building initiatives. Further role responsibilities and measurable outcomes can be added as they are confirmed.

Network Operations / Energy Management Support (NYSC)

Ibadan Electricity Distribution Company (IBEDC) | 2025

- Supported network operations engineers with monitoring electrical distribution infrastructure and outage incidents.
- Assisted with tracking power interruptions and escalation workflows for field response teams.
- Contributed to energy performance data collection and operational efficiency reporting.
- Used Microsoft Excel for operational data entry, analysis, reporting and maintenance of network performance records.
- Prepared technical reports and maintained engineering documentation; collaborated with cross-functional teams.

Graduate Engineering Intern – Maintenance Department

Mikano International Limited | April 2023 – September 2023

- Assisted with installation, inspection and troubleshooting of generators and industrial electrical systems.
- Supported preventive and corrective maintenance activities, routine equipment checks and early fault detection.
- Worked alongside senior engineers on field diagnostics, repair operations and scheduled generator servicing.
- Assisted with generator control panel troubleshooting and maintenance of components including charging alternators, switches and relays.
- Supported power cable connections between control panel busbars and changeover switches, following maintenance and safety procedures.
- Documented maintenance activities and service logs.

Customer Service & Technical Support Representative

Subhub MTN, Ekiti State | 2019

- Managed subscriber registration and data capture within telecommunications service databases.
- Provided customer-facing technical support and guidance on registration, activation and service access.
- Maintained accurate records and supported compliance with registration workflows.

EDUCATION

Bachelor of Engineering (B.Eng.), Electrical & Electronics Engineering

Federal University Oye-Ekiti | 2018 – 2024 | Second Class Upper Division (4.18/5.0)

PROFESSIONAL TRAINING

DevOps Training Programme – Livingworth Academy

Currently enrolled

ADDITIONAL SKILLS

Analytical problem-solving • Technical troubleshooting • Operational monitoring support • Technical reporting and documentation • Cross-functional collaboration • Project coordination • Communication • Attention to detail • Continuous learning
